

# MATTEO CAINER ARCHITECTS

In an era of fast-evolving technology and a continuously changing environment, the role of the architect has undergone multiple transformations; however, his position as public intellectual still gives him the opportunity to create new potential and a possible promise for the future.

If it is the architect that should offer an invitation to **a new way of thinking** or behaviour, then the answer lies beyond its borders. Architecture as multi-disciplinary; **merging art, technology and industry**, while exploring through design experimentation creative possibilities and expanding personal expressions.

**Architecture with research and intellectual speculation, as concept and as built idea.**
